

A Wayne Reaves Tutorial

Workstation Setup Instructions

If you already have the Car Program installed on the main computer, skip Step 1.

1. Download and run <http://www.waynereaves.com/download/fullinstall/WayneReavesCar.exe> on the server.
 - a. It will create a WRCS folder on the root of the drive, with the following subfolders:
 - i. FOXSTUFF -- Contains DLL's and Runtimes, and is the location of our Temp files.
 - ii. VCARS -- This is the data folder for the Car Program.
 - iii. VUPFILES -- extracted update files.
2. Share the WRCS folder with FULL permissions for all users.
3. Map a network drive on each workstation to the WRCS folder on the server.
4. Download and run <http://www.waynereaves.com/download/CarWS.exe> on the workstations. (You can safely ignore the username, company name, and network data path prompts.)
5. After installing, it will create a "WRCS Data Locator" on the desktop. Open this, select the network drive, and double-click the VCARS folder in the folder tree view. You should then be able to click a button marked "Create Shortcut." (Note: The workstations will now also have a WRCS folder with a FOXSTUFF subfolder. If the users have limited permissions on the PC's, give them full access to this folder.)

The server will run the EXE files directly from the data folder, but the workstations will run it from their local FOXSTUFF folder, with a command line parameter. The Target line should read as follows: C:\WRCS\FOXSTUFF\VCARS.EXE Z:\VCARS (where Z:\ is the mapped drive. Note the single space between EXE and Z:.)

There will be Environment Variables set, as follows:

A User variable called PATH: Will either be created or have this appended on:

C:\WRCS\FOXSTUFF\;C:\WRCS\FOXSTUFF\DLLS\;C:\WRCS\FOXSTUFF\RUNTIMES\;

A User-level variable will be set: FOXPROWCFG Value= C:\WRCS\FOXSTUFF\CONFIG.FPW.

Make sure that the mentioned CONFIG.FPW file exists, and opened in Notepad, should look like this: (without the asterisks)

```
*****
screen=OFF
resource=OFF
codepage=AUTO
PROGWORK=C:\WRCS\FOXSTUFF\TEMP
SORTWORK=C:\WRCS\FOXSTUFF\TEMP
EDITWORK=C:\WRCS\FOXSTUFF\TEMP
TMPFILES=C:\WRCS\FOXSTUFF\TEMP
timeout=999999
*****
```

If the above download links are non-functioning, go to www.waynereaves.com, click on "UPDATES", then find the link on the page (Windows Car Installation) and the link for Workstation Setup.

If your system drive uses a drive letter other than C:, then use that letter in place of the C: in the above document.
